RELEVANT EXPERIENCE & TRAINING

Python Full Stack & AI Training Program | Algonex IT Solutions | Nov 2025–Mar 2026

- Completed a five-month practical program and delivered four data-driven applications, strengthening structured information handling and problem-solving.
- Retrieved, filtered and checked database records using SQL; applied form validation to improve data-entry accuracy and consistency.
- Tested and debugged application workflows, identified errors and corrected data or process issues with a quality-assurance mindset.
- Used REST APIs to retrieve and process external information; collaborated with peers using Git and GitHub.

RELEVANT PROJECTS

Politics Content Management Web App | Python, Django, MySQL

- Created and maintained a structured platform for politics-related content, including adding, updating, organizing and retrieving records; relevant to public-affairs content management and research organization.

Intern Management System | Python, MySQL

- Managed structured records through search, review, updates and role-based access; applied careful record handling and retrieval to support information consistency.

Data Quality & Records Reporting Applications | Python, SQL, MySQL

- Built fee-balance, employee and café management workflows; used SQL queries, joins and input validation to retrieve records, support reporting and reduce data-entry errors.

TECHNICAL SKILLS

Data & Tools: SQL, MySQL, Python, Django, REST APIs, Git, GitHub, VS Code
Working Concepts: Data validation, record management, database queries, debugging, reporting and information organization
